CHAPTER 15 THE SPECIAL SENSES - Warner Pacific University

CHAPTER 8 The Special Senses. The evolution of vertebrates shows a trend called cephalization in which special sensory organs develop in the heads of animals, along with the corresponding development of the brain. These special sensory systems, which include the visual, auditory, vestibular, olfactory, and gustatory systems, detect and analyze light, sound, and chemical signals in the environment, as well as signal the position and movement of the head.

The Special Senses | Basicmedical Key

The eye is a vital organ of the human body. It is an organ of sight. It reacts to visible light and creates a vision of the surroundings. The eye contains small visual cells called rod and cone cells, which are found in the retina, and function by allowing the perception of light, color, and vision.
