New York Times and USA Today bestselling authors and award-winning archaeologists W. Michael Gear and Kathleen O'Neal Gear bring the stories of these first North Americans to life in this and other volumes in the magnificent North America's Forgotten Past series. Set five thousand years ago and ranging through what is now Montana, Wyoming, northern Colorado, and Utah, *People of the Earth* follows the migration of the Uto-Aztecan people south out of Canada. It is the unforgettable tale of a woman torn between two peoples and two dreams, of the two men who love her and the third who must have her, and of the vision given to the peoples long ago by the spirit of the wolf. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

This narrative traces the beginnings of humankind, surveying the prehistory of the world from the earliest times to the advent of literate civilization. The study examines the major theories of origin and the development, with emphasis on the cultural complexity of early humans.

Understand major developments of human prehistory *People of the Earth: An Introduction to World Prehistory* 14/e, provides an exciting journey through the 7-million-year-old panorama of humankind's past. This internationally renowned text provides the only truly global account of human prehistory from the earliest times through the earliest civilizations. Written in an accessible way for beginning students, *People of the Earth* shows how today's diverse humanity developed biologically and culturally over millions of years against a background of constant climatic change.

An NPR Best Book of the Year, *Hollow* is the story of a professor whose life is unended after an unspeakable tragedy. When Oliver Bonds, a revered religious studies professor at the University of Texas, loses his toddler son and undergoes intense legal scrutiny over his involvement, grief engulfs him completely. His life as he knows it is over; Oliver loses his wife, home, and faith. Three years after his son's death, Oliver lives in a shack without electricity and frequents the soup kitchen where he used to volunteer. It's only when befriended by Lyle, a con artist with a passion for theories of Hollow Earth, that Oliver begins to reengage with the world. Oliver too becomes convinced that the inside of the planet

might contain a different realm. Desperate to find a place where he can escape his past, Oliver chases after the most unlikely of miracles. With unforgettable characters, wild imagery, and dark humor, Hollow explores the depths of doubt and hope, stretching past grief and into the space where we truly begin to heal. "With the kind of grace not usually seen in accessible modern fiction, Egerton also invokes many other things with this central metaphor . . . Ollie's voice is one of the most believable I've encountered this year, sustained by honesty, realism, and compassion. In his exile, Ollie has taken stock. His reckoning with the past creates the story's exquisite tension and makes the final scene bloom with tenderness . . . The core of Hollow is anything but." --NPR

All the Gears' previous titles in the First North American series have been national bestsellers. Now, *People of the River* is finally available in mass-market. This gripping saga tells of the Mound Builders of the Mississippi Valley. In a time of many troubles, a warchief and his people have lost all hope. But hope is revived with a young girl learning to Dream of Power.

the entire sunless, Antarctic winter “The energy of the narrative never flags. . . . Sancton has produced a thriller.”—The Wall Street Journal In August 1897, the young Belgian commandant Adrien de Gerlache set sail for a three-year expedition aboard the good ship Belgica with dreams of glory. His destination was the uncharted end of the earth: the icy continent of Antarctica. But de Gerlache’s plans to be first to the magnetic South Pole would swiftly go awry. After a series of costly setbacks, the commandant faced two bad options: turn back in defeat and spare his men the devastating Antarctic winter, or recklessly chase fame by sailing deeper into the freezing waters. De Gerlache sailed on, and soon the Belgica was stuck fast in the icy hold of the Bellingshausen Sea. When the sun set on the magnificent polar landscape one last time, the ship’s occupants were condemned to months of endless night. In the darkness, plagued by a mysterious illness and besieged by monotony, they descended into madness. In *Madhouse at the End of the Earth*, Julian Sancton unfolds an epic story of adventure and horror for the ages. As the Belgica’s men teetered on the brink, de Gerlache relied increasingly on two young officers whose friendship had blossomed in captivity: the expedition’s lone American, Dr. Frederick Cook—half genius, half con man—whose later infamy would overshadow his brilliance on the Belgica; and the ship’s first mate, soon-to-be legendary Roald Amundsen, even in his youth the storybook picture of a sailor. Together, they would plan a last-ditch, nearly certain-to-fail escape from the ice—one that would either etch their names in history or doom them to a terrible fate at the ocean’s bottom. Drawing on the diaries and journals of the Belgica’s crew and with exclusive access to the ship’s logbook, Sancton brings novelistic flair to a story of human extremes, one so remarkable that even today NASA studies it for research on isolation for future missions to Mars. Equal parts maritime thriller and gothic horror, *Madhouse at the End of the Earth* is an unforgettable journey into the deep.

Human activity has irreversibly changed the natural environment. But the news isn't all bad. It's accepted wisdom today that human beings have permanently damaged the natural world, causing extinction, deforestation, pollution, and of course climate change. But in *Inheritors of the Earth*, biologist Chris Thomas shows that this obscures a more hopeful truth -- we're also helping nature grow and change. Human cities and mass agriculture have created new places for enterprising animals and plants to live, and our activities have stimulated evolutionary change in virtually every population of living species. Most remarkably, Thomas shows, humans may well have raised the rate at which new species are formed to the highest level in the history of our planet. Drawing on the success stories of diverse species, from the ochre-colored comma butterfly to the New Zealand pukeko, Thomas overturns the accepted story of declining biodiversity on Earth. In so doing, he questions why we resist new forms of life, and why we see ourselves as unnatural. Ultimately, he suggests that if life on Earth can recover from the asteroid that killed off the dinosaurs, it can survive the onslaughts of the technological age. This eye-opening book is a profound reexamination of the relationship between humanity and the natural world.
