Published in 1923, Toward an Architecture had an immediate impact on architects throughout Europe and remains a foundational text for students and professionals. This edition includes a new translation of the original text, a scholarly introduction, and background notes that illuminate the text and illustrations.

Pioneering manifesto by founder of "International School." Technical and aesthetic theories, views of industry, economics, relation of form to function, "mass-production split," and much more. Profusely illustrated.

2014 Reprint of 1927 Edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. This classic work is a collection of essays written by Le Corbusier advocating for and exploring the concept of modern architecture. The book has had a lasting effect on the architectural profession, serving as the manifesto for a generation of architects, a subject of hatred for others, and unquestionably a critical piece of architectural theory. The architectural historian Reyner Banham once claimed that its influence was unquestionably "beyond that of any other architectural work published in this [20th] century to date." That unparalleled influence has continued, unabated, into the 21st century. The polemical book contains seven essays. Each essay dismisses the contemporary trends of eclecticism and art deco, replacing them with architecture that was meant to be more than a stylistic experiment; rather, an architecture that would fundamentally change how humans interacted with buildings. This new mode of living derived from a new spirit defining the industrial age, demanding a rebirth of architecture based on function and a new aesthetic based on pure form.

Revealing the secret sources of Le Corbusier's architecture--concealed by the architect and undiscovered by scholars until now.

Architectural poetry in the machine age Born Charles-Edouard Jeanneret, Le Corbusier (1887-1965) adopted his famous pseudonym after publishing his ideas in the review L'Esprit Nouveau in 1920. The few buildings he was able to design during the 1920s, when he also spent much of his time painting and writing, brought him to the forefront of modern architecture, though it wasn't until after World War II that his epoch-making buildings were constructed, such as the Unité d'Habitation in Marseille and the Church of Notre Dame du Haut in Ronchamp. Basic Architecture features: Each title contains approximately 120 images, including photographs, sketches, drawings, and floor plans Introductory essays explore the architect's life and work, touching on family and background as well as collaborations with other architects The body presents the most important works in chronological order, with descriptions of client and/or architect wishes, construction problems, and resolutions.

A penetrating analysis of the modern architectural tradition and its origins. Since its first publication in 1982, Modern Architecture Since 1900 has become established as a contemporary classic. Worldwide in scope, it combines a clear historical outline with masterly analysis and interpretation. Technical, economic, social and intellectual developments are brought together in a comprehensive narrative which provides a setting for the detailed examination of buildings. Throughout the book the author's focus is on the individual architect, and on the qualities that give outstanding buildings their lasting value.For the third edition, the text has been radically revised and expanded, incorporating much new material and a fresh appreciation of regional identity and variety. Seven chapters are entirely new, including expanded coverage of recent world architecture.Described by James Ackerman of Harvard University as "immeasurably the finest work covering this field in existence", this book presents a penetrating analysis of the modern tradition and its origins, tracing the creative interaction between old and new that has generated such an astonishing richness of architectural forms across the world and throughout the century.

A practicing architect discusses the theoretical background of modern architecture

There is no shortage of books about Le Corbusier, or Mies van der Rohe, or De Stijl. However, this book considers them in relation to each other, observing how a study of one can illuminate the works of the others. Going beyond a superficial look at the end-products of these architects, this book examines the philosophical foundations of their work, taking as its central theme the aim of universality, as opposed to the individual and the particular. Each of these three aimed at universality, but for each this concept took on a different form. The universality of De Stijl and artists like Van Doesburg and Mondrian resembled that of the universe itself: it was boundless, going beyond the limits of the canvas and seeking to abolish the wall as the boundary between interior and exterior space. In contrast, each of Le Corbusier's creations was a self-contained universe within a clear frame, while Mies fluctuated between these two perspectives.
